

## INT-TSI

TOUCHSCREEN KEYPAD

**Your control room**  
enclosed in one powerful device

# Introducing INT-TSI

The extensive capabilities offered by advanced alarm systems based on the **INTEGRA** and **INTEGRA Plus** control panels need to be easily controlled by its users. Discover INT-TSI: an easy-to-use touchscreen keypad. Its remarkable minimalistic design, and functional user interface, make it a perfect choice for smart homes.

## Captivating design paired with broad personalization settings

With its plain, but modern form, and two colour versions, INT-TSI can fit perfectly into any interior, regardless of its design style. To complement this, INT-TSI features extensive personalization settings, allowing you to make your keypad unique. Pick a wallpaper, icon set, or a theme, and make it one-of-a-kind.

## Easy to use

Just take a quick look at your INT-TSI to know what's going on. The keypad utilizes various icon and text widgets to display current system status, and other useful information. Its 7-inch display with touch screen guarantees the same comfort of use you know from using your smartphone or tablet.

## Types of widgets

INT-TSI widgets can be assigned various tasks:

command components  
of your intruder alarm or building  
automation system

indicate status or display parameters  
of connected devices or other system  
components

command and display status  
at the same time

## Group widgets however you like

Every widget can be placed on different menu screens, making it even easier to command your INTEGRA system. All INT-TSI widgets can be grouped by their functions, helping you to quickly find the one you're looking for. Use the Tab Bar to swiftly navigate between different menu screens.

## Additional widgets

INT-TSI also features additional widgets that can display current time, date, or temperature. Next to these, you can place a dedicated openweathermap.org widget.

## Photo frame mode

When left idle, your INT-TSI can serve as a photo frame. Pick your favourite pics, and turn them into a screensaver.

## Help in danger

Widgets on the INT-TSI main screen can be customized to give users swift access to the arming commands, additional settings, or to quickly call for help.

## Numpad

Whenever you need to type in your system password, a numpad pops up on the INT-TSI screen. The numpad changes its display location every time it appears to make it impossible for intruders to guess your system password by tracking your fingerprints.

## Camera feed

INT-TSI can display camera feed from connected video devices. Use this to check what's going on at your gate, or in your garden.

## "Intercom" widget

The keypad, working with door stations supporting the SIP protocol, offers video intercom functionality.

When someone rings the door or gate using the door station, the camera image will be displayed on the INT-TSI keypad.

You can start a conversation, reject a call or let a guest in.

## Easy control of building automation

With INT-TSI, you can give basic commands to your building automation system, created with an INTEGRA or INTEGRA Plus control panel. When properly configured, the control panels can automatically perform single or entire sequences of commands as scheduled.

## Make your smart home smarter

Looking for more advanced automation options? Integrate your **INTEGRA** control panel with the **KNX** devices. KNX is the world's most advanced and leading standard for building automation devices. With these, you can gain more elaborate control over your entire system, including smooth dimmer and temperature control. INT-TSI can easily control all these advanced functions.

## 30 YEARS OF EXPERIENCE

Professional protection of each type of premises, as well as people staying therein, through advanced, yet functional and cost-effective solutions – these few words may serve as the shortest description of the mission of SATEL, a manufacturer of security systems with involvement of 100% Polish capital. Due to integrity in business and a special emphasis on high quality and a wide range of products offered, the SATEL brand has been highly appreciated in the industry for 30 years.

This philosophy of management and hard work of more than 350 SATEL's employees produce tangible results. The wide range of over 400 offered products provides countless opportunities to create security, home automation, fire alarm, access control and monitoring systems, tailored to the individual needs of each user. At the same time, these systems meet all requirements prescribed by Polish and international regulations and industry standards.

Bringing the functionality of devices into line with current requirements and expectations of the market with the use of the latest technologies is one of the main objectives of SATEL. For this reason the design and production departments of the Company are continuously being modernized and expanded. A natural consequence of all actions aimed at the production of top-quality devices was the introduction of the quality management system conforming to ISO 9001 in 2002. Regardless of this certification, SATEL also carries out a full functional test of all products leaving the production line, thus ensuring reliability of the manufactured devices. Focusing on modern design and attaching importance to the highest levels of quality and functionality of its products, SATEL has gained many satisfied customers not only in Poland but also in more than 50 markets worldwide.
